

MWM SICAV - Bond Opportunities B - Acc

Monthly summary report | as at 31 May 2022

Investment Objective

The fund seeks to achieve capital appreciation over the medium term by investing in a diversified portfolio of fixed income securities (investment-grade corporate bonds, government bonds, high yield and emerging market debt as well as convertible bonds). The main focus is put on bottom-up selection. Interest rate as well as credit risks are managed actively.

Market Review

Markets were seeking direction in May. The month started with the significant selling of global bonds across the world. Investors were worried that the current environment of growing inflation and tighter monetary policy will not ease soon. However, while the 10Y US treasury retraced its movement and finished the month lower at 2.85%, the 10Y German Bund is 0.18% higher at 1.12%. Indeed, President Christine Lagarde of the European Central Bank (ECB) announced that the ECB was on track to raise rates and “exit negative interest rates by the end of the third quarter”. At the same time, the European Commission now expects real GDP growth in Europe to be just 2.7% in 2022 (down from a previous forecast of 4%) and 2.3% in 2023. Slowing growth and persistent inflation cause markets to ponder which path to pursue, leading to rate volatility, which is detrimental to credit. Against this backdrop, the Investment Grade and High yield segments returned -1.23% each.

Portfolio Performance

The fund lost -1.43% in May. The fund's fall has been mitigated by our shorter duration in the investment grade section. However, some specific names contributed negatively relative to their size in the funds, such as Orpea 2025 and VGP 2029. The yield to maturity of the fund reached 5.2% with a 2.7 duration.

Market Outlook

As the summer progresses, we expect inflation to be the most pressing concern as some senior ECB officials continued to advocate for more immediate action. As a result, in this environment, we continue to favor very short duration profiles.
